1. Claims 3-7, 9-13 and 16-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Iwasa et al. (US 2002/0012786). Iwasa et al. disclose a porous resin film. The porosity of the film is 10% or more [0012]. The film is a mixture of hydrophilic and non-hydrophilic resin components. The film may have a base layer that may be up to 100 wt % thermoplastic resin [0014] and which may also be porous [0056]. The film is used in a recording medium which may be for ink jet printing [0061]. The hydrophilic thermoplastic resin may be polyvinyl alcohol [0018]. The film may be made porous using a foaming agent [0054]. Supports of materials such as polyester are disclosed [0060]. The reference states that optional additives may be added and gives examples at [0044]. While the examples do not include fluorosurfactants or crosslinker for the hydrophilic resin, these are conventional additives in the art of ink receptive media. Surfactants are known additives to aid in dispersion of components and cross-linkers increase water resistance of the medium when a hydrophilic binder is included. Therefore, it would have been obvious to one of ordinary skill in the art to include conventional additives in conventional amounts for their well known purposes as set forth above.
2. Toda et al. (US 2005/0276935) is cited as directed to an ink jet recording medium having a porous water swellable layer. Toda et al. disclose crosslinking and inclusion of surfactants, as well as embodiments with multiple layers.
3. Applicant's arguments with respect to claims 3-7, 9-13 and 16-21 have been considered but are moot in view of the new ground(s) of rejection. Prior rejections have been withdrawn in light of applicants' acceptable terminal disclaimers.
